

TIGER ANALYTICS APP ENGINEERING ASSIGNMENT – Context & Architecture Diagram

Prepared in Powerpoint and pasted here as image

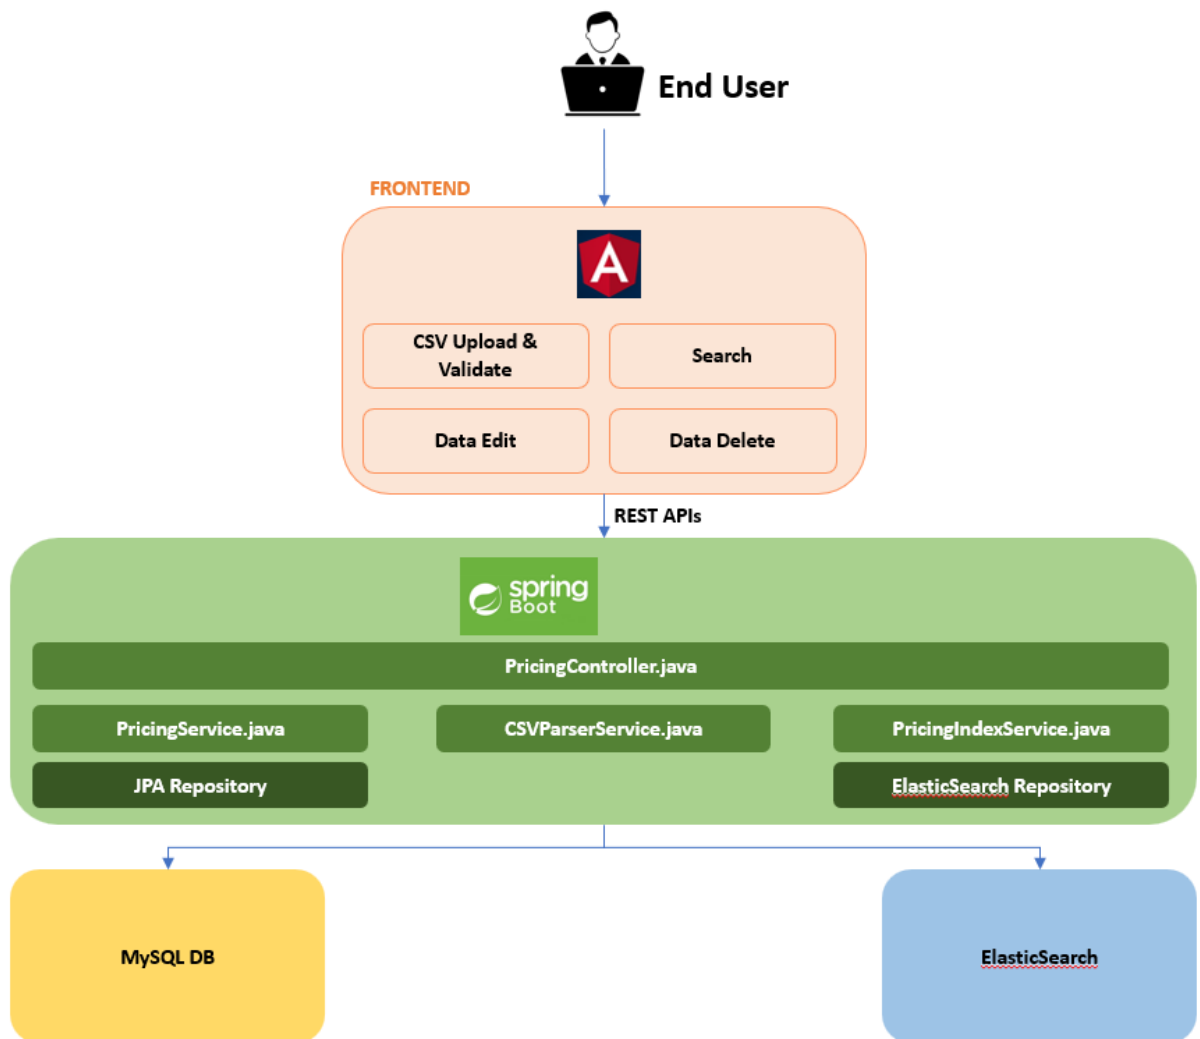

How data flows?

- UPLOAD: User → CSV File → Parse & Validate → Save to MySQL → Index to ES → Response
- SEARCH: User → Filter Criteria → Query ES → Return paginated results
- EDIT: User → Modified fields → Update MySQL → Re-index in ES → Response
- DELETE: User → Confirm → Delete from MySQL → Remove from ES → Response

Endpoints:

- POST /pricing/upload Upload CSV file (multipart/form-data)
- GET /pricing/search Search with filters (storeId, sku, productName, dateRange, priceRange)
- PUT /pricing/{id} Update a pricing record
- DELETE /api/pricing/{id} Delete a pricing record
